SUMMARY

Backend-heavy Full-Stack Lead Software Engineer with **3+ years** shipping web products end to end: Python and Node.js/TypeScript APIs, React interfaces, PostgreSQL and deployment, across healthcare integration, multi-tenant SaaS and AI products. Co-author of a peer-reviewed Springer paper (CSSP, 2025).

PUBLICATION

Evaluation of a low-cost single-lead ECG module for vascular ageing prediction and studying smoking-induced changes in ECG

Circuits, Systems, and Signal Processing (Springer), 44(8), 5852-5875, 2025 · DOI: 10.1007/s00034-025-03048-2

Co-author, equal contribution (3rd of 7 authors): data collection and the ML pipeline. **42 subjects, 6,131 segmented samples**; random forest **R² 0.99** on segmented data and **0.87** with transfer learning on unsegmented data.

EXPERIENCE

Lead Software Engineer, TransData · Lahore, Pakistan · Mar 2025 to Present (leading 5 engineers since Mar 2026)

- Became top contributor (**272 of 389 commits**) on a React 19 and Node.js/TypeScript operations console for an HL7 healthcare integration engine, by building its BFF API layer, bulk message reprocess and export with CSRF-protected multipart handling, PHI-access auditing features, and real-time message-trend dashboards.
- Made all-channel message search on that console **show partial results instead of silently truncating**, by batching per-channel requests with timeouts and adding a banner that names the channels that timed out.
- Delivered a **deployed client-review demo** of a multi-tenant real-estate SaaS and its admin control plane as sole owner, by architecting it (database-per-tenant over a shared property store) and building the Next.js and Tailwind frontends behind Docker and Traefik with automated TLS.
- Built and hardened an AI voice front-desk product for dental clinics through its **production launch**, by building its internal platform-admin console end to end (React 19, TypeScript, Tailwind, shadcn/ui, append-only audit log with keyset pagination) and closing multi-tenant Postgres row-level security gaps behind it.
- Took an industrial parts cost-estimation platform from unstable to stable and **handed it over to another team member**, by owning its Django backend (PostgreSQL schemas, REST APIs, Celery ingestion), CI/CD and Docker environments, and frontend UI features.

Software Engineering Team Lead, VeritusLabs · Oct 2023 to Mar 2025 (Software Engineer Jul 2023 to Oct 2023)

- Promoted to Team Lead and led **a team of 4 engineers** on QGroundControl-based drone-control and swarm features in C++ and Qt/QML, including mission planning and real-time telemetry over MQTT.
- Delivered a full-stack AI prompt-management web app with streaming OpenAI responses, RBAC and S3-backed storage, **deployed through Docker and CI/CD**, by building its Django/FastAPI and LangChain backend.

PROJECTS

HireTrack · React 19, TypeScript, LangGraph, Supabase · github.com/mubashir-rehman/job-application-tracker

- Built and open-sourced a job-application tracker (sole author, **89 commits, public repo, live deployment**), by shipping a deterministic-first LangGraph pipeline that tailors resumes and scores job descriptions across five AI providers (bring-your-own-key), plus an offline-first PWA and a remote MCP server.

The Quetta Tea 2.0 · Astro 5, static site · the-quetta-tea-20.vercel.app

- Shipped a static Astro 5 site for a Lahore cafe scoring **100/100/100 on desktop Performance/Accessibility/SEO and 95 mobile Performance** in Google PageSpeed Insights (CLS 0, TBT 0 ms), by optimising images and layout.

SKILLS

Frontend: React 19, TypeScript, JavaScript, Next.js, Astro, Vite, Tailwind CSS, shadcn/ui

Backend and data: Python, SQL, Django, Django REST Framework, FastAPI, Node.js, REST API design, OAuth2, JWT, RBAC, CSRF, PostgreSQL, MySQL, Redis, Supabase, Celery

AI/LLM: OpenAI API, Gemini, LangChain, LangGraph, MCP, pgvector

DevOps: Docker, Nginx, Traefik, GitHub Actions, CI/CD, AWS, DigitalOcean, Linux

EDUCATION

BS Computer Science, Information Technology University, Lahore
